WORKSHEET . HUMAN AT WORK

An AI audit of *your own job*

A short way to see where AI could help, where it must not, and what you can show for it.

List your own job, one task per row, then decide what AI could safely do for each. Use it on Friday of your first safe week, and again whenever your work changes. It works with any tool.

Check your employer's policy before you enter anything about your work in any tool. Fill this sheet in on paper or in a document. Do not paste filled-in rows that contain company details into an AI tool unless the policy allows it.

Part 1. Your task list

Task	How often	Time a week	Sensitive content? (Y/N)	Risk step (1, 2, 3)	What AI could do	How I will check it

Risk step: 1 = no company information goes in. 2 = work content, with care and the policy's yes. 3 = do not use AI. When unsure, use the higher number.

Part 2. What I will try first

Pick the two rows with the lowest risk step and the most time. Write them here with the date you will try them.

Task	Date	What I will ask	What I changed or fixed	Time before / after

Part 3. Keep this as evidence

If you use AI at work, a dated record of what you tried, what you checked, and what you changed is useful: for your own learning, and for a conversation with your manager or a performance review. Keep it factual. Note the policy you followed and the person who confirmed it.

General information. Not legal, compliance, or HR advice. Do not enter confidential details in this sheet if you plan to share it.
